SUCCESSFUL GAS WELL

Stealth Energy Inc. (“the Company”) has drilled its second gas well (“Hailstone #23-2”) to a depth of 2400’, and continuing to an approximate depth of 3000’, in Stillwater County, Montana. A total gas monitor in the return fluid stream showed a significant gas increase peaking at approximately 600 units at a depth of 900’ and again at approximately 100 units at a depth of 1,300’. These pay zones are classified geologically as the Frontier, a primary source for gas production in this area. Several commercial gas producing wells in the region, have reported similar comparable gas indicators at this stage.

Upon drill completion, the Company will initiate a formal flow test for both ”Hailstone #23-1” and ”Hailstone #23-2” which will involve logging, perforating and intensive flow testing. The main ”SAGA” gas pipeline runs approximately 8 miles to the South West and Stealth has now initiated a survey for multiple drill sites along this pipeline route over lease lands that the Company owns.

Stealth Energy Inc. is an exploration and production oil & gas company with its field office in Billings, Montana, USA. The company continues to develop its own oil and gas properties and is continuing to make acquisitions primarily within the states of Montana and Wyoming. For further information please contact Carlo Nigro at (604) 669-7831 or stealthenergy@telus.net.
